

UNDERSTANDING BIORESONANCE

Bioresonance uses the BICOM (www.regumed.com) for biofeedback regulation of the cybernetic system of the body. The cybernetic system is the body's internal regulatory system which defends the body from illness and disease and removes stressors. BRT allows the practitioner to access and influence the cybernetic system, which activates the body's own healing mechanisms.

Science indicates that there are subtle energies in our bodies at all times. Acupuncture, much older than conventional western medicine, has been manipulating bodily energies (Chi) and the balance of this energy for positive results for thousands of years. The output generated by the BICOM is a subtle electromagnetic energy comparable to the energies constantly flowing in our bodies.

All forms of matter display an electromagnetic frequency pattern. The determining factors for a frequency pattern include: The frequency (oscillations per second) The form or characteristic of the oscillation (sine, square, stationary, orbital, spherical) The amplitude (the intensity of the oscillation)

Molecules emit specific oscillation patterns. Molecular frequency patterns are established within cells, and between cells (intercellular matrix), which can be physiological (healthy) or pathological (unhealthy). Water molecules tend to form clusters, which allows frequency

patterns and information to be stored. Pathological oscillation patterns may be maintained long after the pathogen or inciting cause is gone because of the covalent bonding properties inherent in water. BICOM BioResonance therapy can “de couple” the hydrogen bonds of the cluster structure, by generating a frequency pattern of a different intensity or waveform. This will gradually eliminate pathological interference patterns. BICOM BioResonance therapy further initiates a regulation process, which restores and promotes a physiological or healthy state. By reducing molecular, pathological frequency patterns by the decoupling of molecules in cluster structures and, as a result, activating the body’s capacity to regulate and heal itself. Information patterns are detected, modified, and returned to the body as physiological information patterns. This stimulates detoxification, enhanced bio-regulation, and restoration of an appropriate cybernetic control mechanism (homeostasis).

Healthy communication between cells is hindered due to the buildup of stressors. Stressors include: psychological stress, chemicals, heavy metals, pathogens, EMF, Radiation, junk food, food sensitivities, medications. The BICOM corrects disturbed communication in various ways ranging from the transmission of “healthy vibes” to the cancellation of unhealthy frequencies of stressors. The cancellation of unhealthy frequencies is much like the Active Noise Cancelling systems in headphones which receive noise and send “anti-noise” cancelling the noise. Thus the frequency patterns of stressors can be cancelled out and physical remnants of the stressor are processed through the body

During a therapy session the BICOM is continuously receiving, measuring and modifying frequencies from the client and sending frequencies back to the patient creating a “real time” circuit. Frequencies in the BICOM circuit are natural and similar to the amplitude and voltage already in the body. It is essential to understand that the bioresonance therapy is unique from all other technologies in that it works with the same subtle energies that are already in the body and it does so with little enhancement or change to the voltage, making the BICOM effective, safe and natural.

Advancements in science including biophysics, quantum physics, computer science and electrical engineering have led to the invention and development of BICOM technology. It should be noted, however that advancing science does not necessarily mean that the scientific and medical paradigms are evolving at an even pace. One may notice this lack of acceptance of most new revolutionary scientific concepts in a practical sense where in holistic methods such as acupuncture have taken a long time to gain acceptance in the mainstream.

References for BioResonance and its scientific basis

There is an abundance of published information available about the people and concepts relating to the BICOM and BRT, a few of which are as follows:

Carlo Rubbia (Italy) Shared Nobel Prize in Physics 1984 Proved that allergic reactions can be caused by electrical signals operating in the radio frequency range. Electromagnetic frequencies (EMF) can have an effect on a person. Quantitative ratio of nucleons and photons. All of the causes involved in the behavior of matter are found in the interaction of photons and nucleons. Matter, being compressed energy, can be influenced by EMF.

Cyril Smith (England) Developed theories and gained recognition for his work relating to biophotons and how cells emit and absorb light. These findings were directly incorporated into BICOM development. This leads us to understanding how cells communicate and how they can be controlled. https://www.researchgate.net/profile/Cyril_Smith

Lois Victor Prince de Broglie (France) Nobel Prize in Physics 1929 There is duality within matter; it exists as particles and as waves. Every particle of matter, including cells, organs, pathogens, etc. has an electromagnetic field.

<https://www.nobelprize.org/prizes/physics/1929/broglie/biographical/>

James Oschman, PhD (USA) Atoms wobble, radiate energy and create specific signature both individually and a specific signature collectively. Therefore, every material structure in the universe radiates a unique energy signature. Unique energy signatures are the identifiers which we need to modify for healing and wellness. <https://www.faim.org/dr-james-oschman>

Bruce Lipton, PhD (USA) “cells are 100 times more sensitive to electromagnetic information (signals) than to chemical information”. Due to direct cause and effect in that communication is energetic, frequencies are an effective healer.
